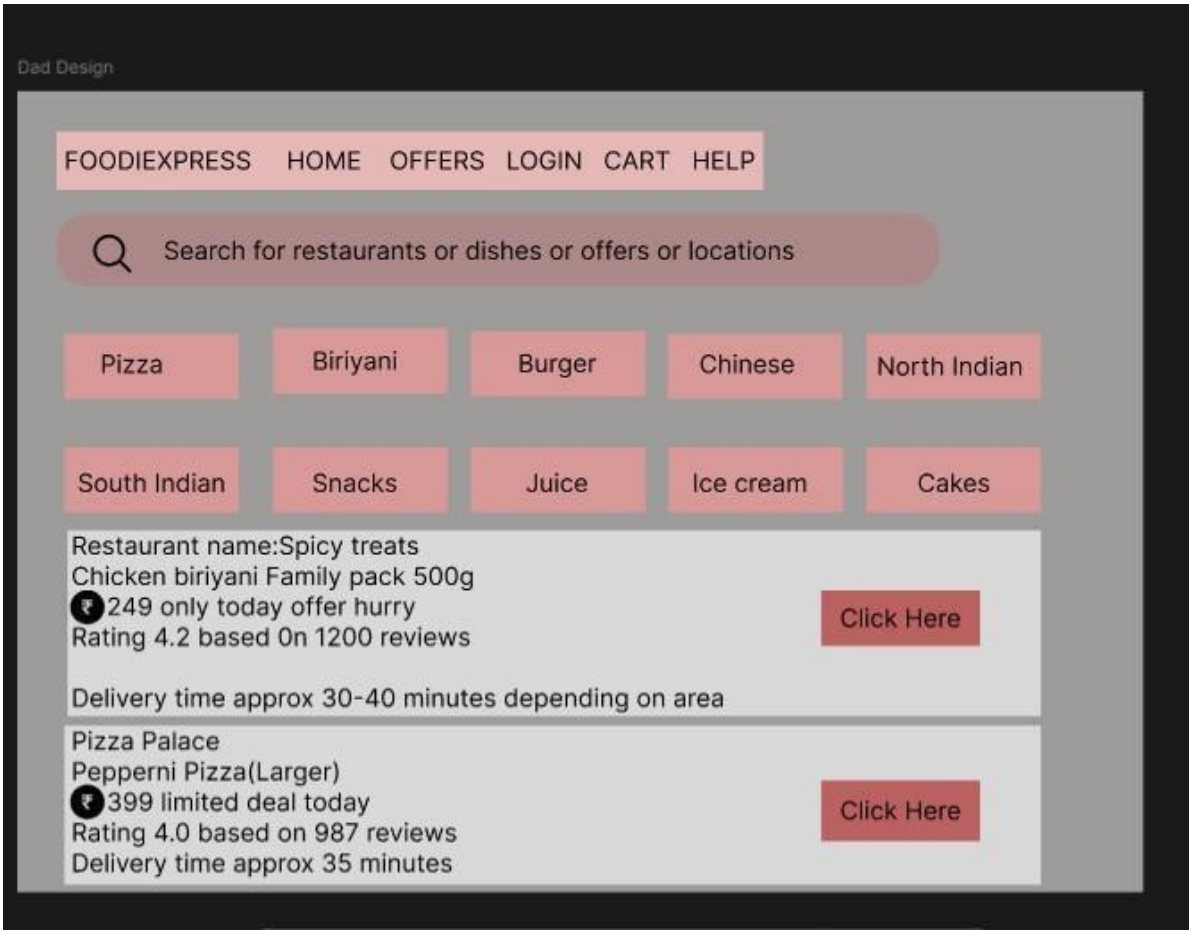
Food Delivery Website

(Bad UI vs Good UI Comparison)

➢ BAD UI DESIGN (FOOD DELIVERY WEBSITE)



What the design looks like:

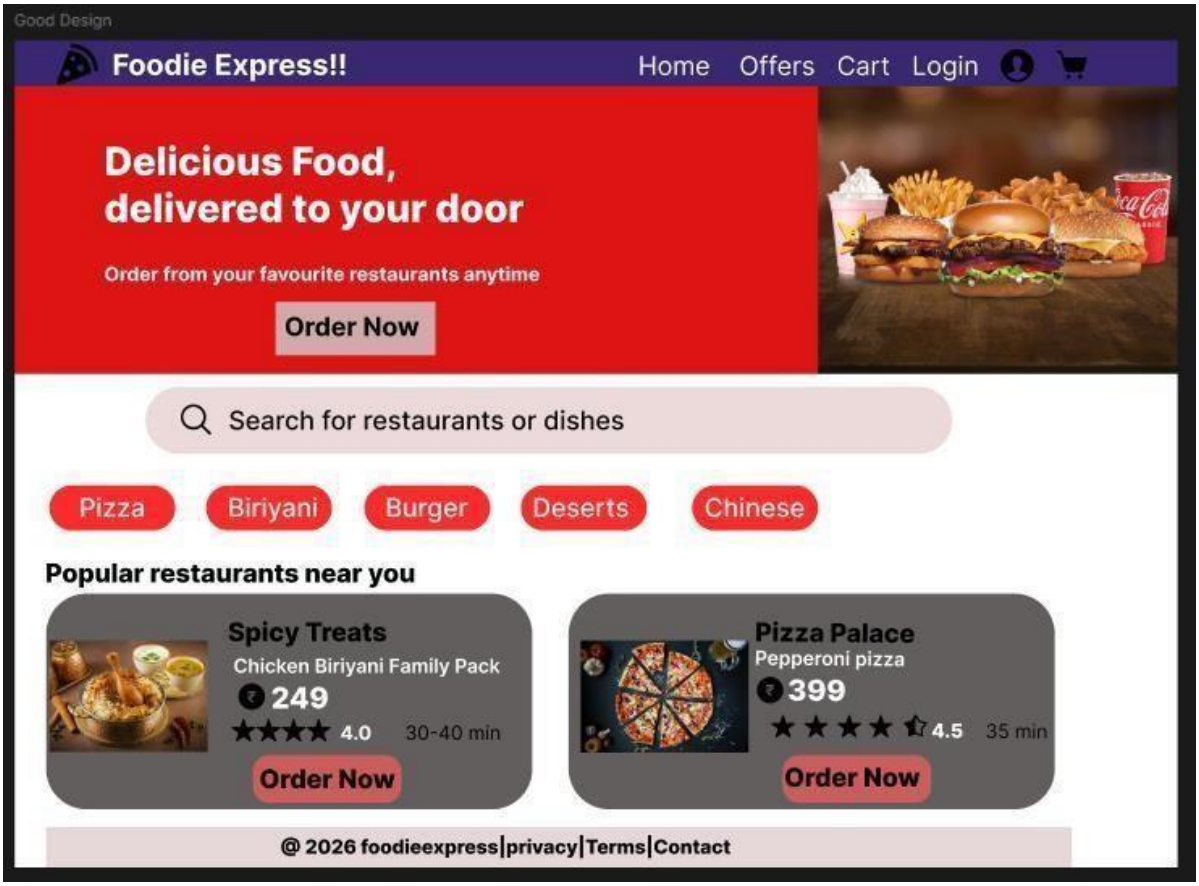
- Crowded top menu with too many items
- Long search text
- Many category buttons shown together
- Restaurant cards contain too much text

- Buttons say “Click Here”
- Many colours used without consistency

<u>Why this is bad:</u>

- Hard to understand which information is important
- Screen looks busy and confusing
- Too many colours reduce visual clarity
- Text is not well organized
- Buttons are unclear about action

➢ GOOD UI DESIGN (FOOD DELIVERY WEBSITE)



What the design looks like:

- Simple top navigation (Home, Offers, Cart, Login)
- Large hero banner with poster image
- Clean search bar with short text
- Limited category chips (Pizza, Biryani, Burger, etc.)

- Clean restaurant cards with proper spacing
- Buttons clearly say “Order Now”

Why this is good:

- Easy to understand and scan
- Clean and professional look
- Consistent colours and fonts
- Important details stand out clearly
- User knows exactly where to click
